### STAR WARS

#### Death Star II

1. The Death Star II is a massive space station that orbits the planet of Endor. It is the second and larger version of the Death Star, designed by the Galactic Empire to destroy planets. It is a spherical structure with a diameter of 100 kilometers. The station is built from a variety of materials, including metal, stone, and organic matter. It is powered by a central reactor core that generates energy for the station's various systems. The station is capable of firing a powerful laser beam that can destroy an entire planet. The Death Star II is a key element in the Star Wars franchise, and it is a popular subject for LEGO fans.
