

WIZARD'S
Worlds

What secrets
await
within?

LEGO BUILDERS CLUB

THE ENTRANCE - NO. OF BRICKS: 19,634 BUILDING TIME: 752 HOURS. DRAGONS - NO. OF BRICKS 53,222 BUILDING TIME: 380 HOURS.
Special thanks to the model team at LEGO Australia who spent 14 busy months creating the large Wizard's World models you see in this book.

Embark ye now upon
a journey through the
Enchanted Castle and its
mysterious forest surrounds.
Note well the words of the

wizard, for his wisdom shall
deliver you through perils
and pitfalls, whence you may
safely discover... "What
secrets await within."

Was it a dream or did I really venture through a world of ages past?

I know I saw the sentries, not on guard but asleep. And a book with curious questions asked.

To guard against the ever-present threat of attack, olden-day castles were heavily fortified, with complex measures such as trap doors, moats and drawbridges used to repel invaders. From strategically-placed cavities in ceilings and walls, called Machicolations, missiles could be thrown on the enemies below.

NO. OF BRICKS: 46,862. BUILDING TIME: 1,630 HOURS.

BUILD A KALEIDOSCOPE

You can build your very own kaleidoscope with LEGO bricks and pieces in your collection! For this project, you'll need:

- Six hinge bricks, two 1x6 TECHNIC beams, one axle piece, and assorted bricks.
- Some LEGO windshield pieces to make the "object chamber." (You'll find windshield pieces in LEGO Space and Town sets. A round chamber similar to the one shown here can be found in BLACKTRON® sets #6981, #6887 and #6988.)
- A small sheet of Mylar paper with peel off adhesive backing. You can find Mylar paper in art supply and hobby stores. The Mylar works like a mirror and reflects all the awesome images you'll see through your finished kaleidoscope.

- 1 Build three columns of bricks. Make the last 3 bricks in one column 2 x 6 bricks. Then attach them together with hinges at each end as shown. Set aside two hinges for use later.
- 2 Lay the model down flat. Then measure a piece of Mylar to fit on the model. Once you've cut the Mylar to size, peel off the adhesive backing and stick the Mylar to your model.
- 3 Then place the extra hinges on each end as shown and carefully fold the model.
- 4 Attach the hinges so the model now has a long triangular shape.
- 5 Add 4 more layers of bricks to one side as shown, add a top layer of 1 x 6 TECHNIC beams.
- 6 Next, build the object chamber. 6A 6B 6C 6D
- 7 Attach the object chamber to the main model and your working kaleidoscope is ready for viewing!

Turn the wheel to see all the awesome shapes and colors!

In his wondrous den the Wizard spoke to me of things ahead and the need for care.

He warned of witches cruel and twisted and I thanked him as I left his lair.

Guardian of the Isle of Man was the wizard Manannan Mac Lir, whose horse Enbarr could carry him with ease over land or sea. No weapon could pierce Manannan's armour, and no enemy could survive the thrust of his sword which was named the Answerer.

NO. OF BRICKS: 53,705 BUILDING TIME: 1,865 HOURS.

*passed the Elfin
forge; the little
folk working hard,
in their funny,
stumbling way.*

*And over Goblin's Bridge,
I heard much mischief
in the air of pranks they
planned to play.*

Small stone bridges are a favorite haunt of goblins; the babbling of the brook mixing with their chatter and taunts, with which they vex and confuse passing travellers. These mischievous creatures love to annoy and irritate others with their strange sense of humour.

NO. OF BRICKS: 47,105 BUILDING TIME: 1,791 HOURS.

BUILD A WIZARD

Build your own magical wizard!

This whimsical Wizard was created specially for LEGO Club members. It's really a sneak preview of the new Wizard mini-figure available in LEGO Castle sets starting in August, 1993.

Since this is a tall model, the LEGO Model Shop broke it down into sections. Each step shows a separate section of the wizard. When you have built each section, then simply attach the sections one on top of the other. Start by building step one on a base plate. Then connect section two on top of section one, and so on.

This model is made out of basic LEGO bricks and pieces. Have fun building your Wizard in a rainbow of colors. When you build it yourself – it's Magic!

- SECTION 1** Begin by building a section for the feet. (Build this first section on a base plate.)
- SECTION 2** Next, start a section for the lower body.
- SECTION 3** This section will continue the lower body.
- SECTION 4** Build a section to start the beard.
- SECTION 5** Continue building the beard and upper body.
- SECTION 6** Now begin the shoulders, arms, and hand.
- SECTION 7** Then build another section for the arms and the wand.
- SECTION 8** Next begin building the head.
- SECTION 9** Then build the eyes and the start of the hat.
- SECTION 10** Finish the hat, and you're ready to stack your model together!

Back View
of Wizard

Look!
A fairy glen with
pixies and elves,
dancing and hiding
'mongst the trees.

But the forest is growing
much darker now.

A shriek!
Who can
this be?

If on a summer's night a wreath of light
glittered on the grass of a meadow, wise
people drew away. This was a fairy ring of
elfin dancers, and whoever stepped within
its glow would be imprisoned in their world.

ethaxis!
The Witch!
*Her cackled
threats ring out.
Should we follow
her advice?*

*Her craggy face distorts
with hate and rage, then
she vanishes in a trice!*

The magic energy source that enables witches to fly on broomsticks across stormy skies was a brew made from the most potent herbs in witchcraft: monkshood, henbane, deadly nightshade, mandrake and hemlock mixed with lard. This volatile potion was just one of the many brews that witches made.

NO. OF BRICKS: 4,712 BUILDING TIME: 165 HOURS

BUILD A BUTTERFLY

Build a beautiful butterfly – with wings that really flap with the magic of LEGO TECHNIC!

A variation of this model was built by 13 year old Francesco Orabona from Italy at the 1992 LEGO World Cup. He won first place in the LEGO TECHNIC category for his imaginative model. The U.S. LEGO Model Shop elaborated on Francesco's design and came up with this colorful butterfly. We hope you enjoy it!

To build the butterfly you'll need to gather some LEGO plates and some TECHNIC beams and accessories.

- 1A Begin your gear system as shown. (Attach your model to a baseplate to keep it steady throughout building.)
- 1B Connect the two sections with the axles and then the plates on top. (Back view).
- 3 Front view.
- 4 Begin building the supports for the wings.
- 5 Build the wings and the antennae as shown.
- 6A Back View of Head and Antennae.
- 6B Front View of Head and Antennae.
- 7 Attach the head and wings. Then have fun showing your friends your special LEGO Butterfly with wings that really flap!

NO. OF BRICKS: 73,086 BUILDING TIME: 2,458 HOURS

Strange
shadowy
shapes dance and
play on ruined
walls as we enter
the Dragon's lair,
so dark and vast.

The fearful beast, awakened,
roars and lunges out, then
withdraws as
we hasten past.

In ancient times, a ferocious dragon who needed no sleep, kept guard over the fabulous Golden Fleece in the Kingdom of Colchis. With guile and cunning, however, the Greek hero Jason stole the Fleece from under the dragon's very nose and returned triumphantly with it to Athens.

The Fabled World of Dragons

There are many types of dragon. They differed in shape and size and lived in quite different environments. For instance, in China dragons were classified according to the functions they performed. The four main places that dragons inhabited were caves, craggy mountain tops, marshes and swamps, and the rivers, lakes and seas of the world.

Classical Dragons

The Wyvern

This much feared creature had a coiling, snake-like body with eagle's legs and scaly wings. It ravaged the countryside throughout northern Europe and Greece.

The Amphiptere

Peculiar in form, the Amphiptere was a legless serpent with small wings. It lived in the Middle East and guarded the precious trees that produced frankincense.

The Heraldic Dragon

This is the most common and best known of all dragons. It had huge teeth, four legs, strong claws, formidable spikes down its back and a barbed tail that could sting.

The Lindworm

A flightless creature, the Lindworm had the body of a snake, one pair of legs and powerful jaws. Marco Polo saw several on his travels through central Asia.

Chinese Dragons

Heavenly Guardian

Celestial dragons guarded the heavens and held up the houses of the gods. Each of its feet had five claws and its short, powerful wings kept its long, coiling body aloft.

Treasure Keeper

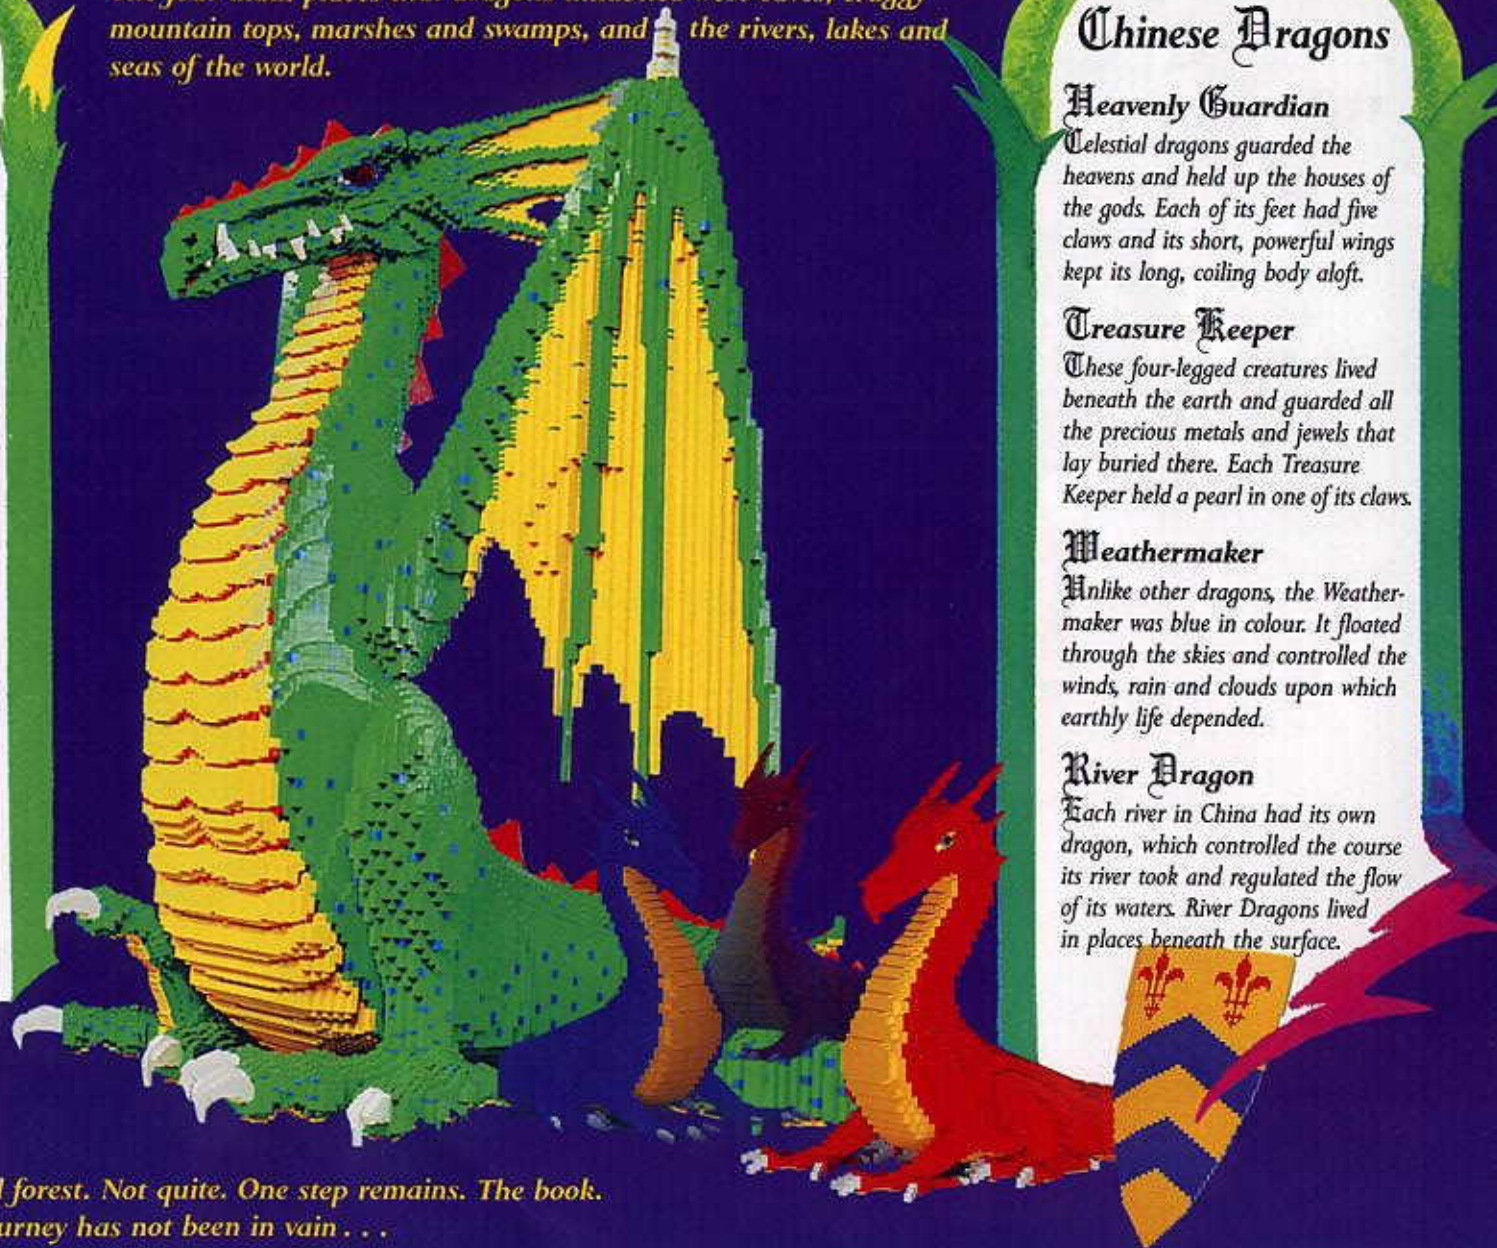

These four-legged creatures lived beneath the earth and guarded all the precious metals and jewels that lay buried there. Each Treasure Keeper held a pearl in one of its claws.

Weathermaker

Unlike other dragons, the Weathermaker was blue in colour. It floated through the skies and controlled the winds, rain and clouds upon which earthly life depended.

River Dragon

Each river in China had its own dragon, which controlled the course its river took and regulated the flow of its waters. River Dragons lived in places beneath the surface.

We have traversed the enchanted forest. Not quite. One step remains. The book.
The sword. The message. Our journey has not been in vain . . .

BUILD A DRAGON

Create your own realistic looking dragon!

This scary looking creature can be built with basic LEGO bricks in any color you choose. Use your imagination to mix and match colors for your own best beast!

- 1 Begin by building the start of the feet and tail on a baseplate.
- 2 Continue the tail and hind legs.
- 3 Connect the tail and legs.
- 4 Continue the lower body and belly.
- 5 Begin building the shoulders.
- 6 Build the arms.
- 7 Begin building the head and eyes.
- 8A Finish the head. Then add blue bricks from the top of the head to the end of the tail.
- 8B Imagine you have created a Fire-Breathing Dragon.

What beauty
is this? The
Water Princess,
tragic sister of
the evil Witch.

*Although frozen in time,
we hear her whispered
advice as the water swirls
in her crystal dish.*

*Long ago the
Sorceress Circe,
stricken with
jealousy, concocted
a magic potion and
poured it into the
crystal pool in
which the beautiful
nymph Scylla bathed daily.
On contact with the enchanted
waters, Scylla became a slother-
ing beast, terrorising passing
sailors for centuries after.*

NO. OF BRICKS: 12,007 BUILDING TIME: 566 HOURS.

Lo! By the
castle wall,
a well, long
forgotten. Could
ancient magic
lay entombed?

*Forsooth! A sword!
It spirals from the depths,
then glistens and
returns from
whence it came.*

*King Arthur's magic sword
Excalibur was given to him
by the Lady of the Lake.
Years after, when the
King was at last stricken
in battle, he ordered
his knight Sir
Bedevere to throw
Excalibur back into the lake, where-
upon a hand rose from the waters,
caught the sword and vanished.*

NO. OF BRICKS: 22,188 BUILDING TIME: 642 HOURS.
